

*AMENDMENTS TO THE CLAIMS*

This listing of claims replaces all prior versions, and listings, of claims in the application.

1. (Currently amended) An electronic apparatus suitable for displaying information via a display device, the display device having at least one display panel and being provided with driving electronics, the display device being provided outside the electronic apparatus and the display panel being movable between a first position in which the display panel is substantially not visible and a second position in which at least part of the display panel is visible, the electronic apparatus being provided with means for providing display parameters to the display panel in the second position,

wherein the display device has a first housing, ~~the first housing~~ comprising the display panel in one of the first and second positions and a second housing comprising driving electronics for the display panel, at least part of the display panel being flexible and the display panel being rollable or foldable, and wherein the electronic apparatus includes a further display device.

2. (Original) An electronic apparatus according to claim 1, the first housing comprising fixing means for fixing the first housing in an enclosure.

3. (Original) An electronic apparatus according to claim 2, the fixing means for fixing the first housing in the enclosure being selected from the group of spindle mechanisms, clicking mechanisms, magnetic fixing and gluing.

4. (Original) An electronic apparatus according to claim 2 having closing means for the enclosure.

5. (Canceled)

6. (Previously Presented) An electronic apparatus according to claim 1, the display panel being movable to at last one further operating position in which only a portion of the display panel is ~~partly~~ visible.

7. (Original) An electronic apparatus according to claim 1, the second housing and the electronic apparatus being mechanically interconnected.

8. (Previously presented) An electronic apparatus according to claim 1, the second housing and the electronic apparatus being mechanically interconnectable.

9. (Previously presented) An electronic apparatus according to claim 1, the driving electronics in the second housing and electronic circuitry in the electronic apparatus being interconnectable by electromagnetic coupling.

10. (Canceled)

11. (Previously presented) An electronic apparatus according to claim 1, the display panel in at least one of the first and second positions being fixed by a spring mounting or a spindle mechanism in the first housing.

12. (Previously presented) An electronic apparatus according to claim 1, the driving electronics in the second housing and the display panel being electrically interconnectable by mechanical coupling.

13. (Original) An electronic apparatus according to claim 12 having a clamping mechanism to interconnect conducting patterns of the driving electronics in the second housing to conducting patterns of the display panel.

14. (Previously presented) An electronic apparatus according to claim 1, in which the first housing comprises means for introducing and fixing the display panel.

15. (Canceled)

16. (Previously presented) An electronic apparatus according to claim 1, the electronic apparatus comprising the second housing.

17. (Previously presented) An electronic apparatus according to claim 1, the electronic apparatus comprising a controller for selecting at least one application for the display device and

further comprising memory means for storing at least display parameters related to said application and means for providing said display parameters to an interface between the electronic apparatus and the display device.

18. (Currently amended) An electronic apparatus suitable for displaying information via a display device, the display device having a display panel provided with driving electronics, the electronic apparatus being provided with means for providing display parameters to the display device, the display device having at least:

one a first movable housing, ~~the housing~~ comprising the display panel, and

a second housing ~~the electronic apparatus~~ comprising driving electronics for the display device, and

wherein at least part of the display panel ~~being~~ is flexible and the display panel ~~being~~ is rollable or foldable, and wherein the electronic apparatus includes a further display device.

19. (Currently amended) An electronic apparatus suitable for displaying information via a display device, the display device having a first housing for storing a display panel when not in use and a second housing containing ~~provided with~~ driving electronics, the electronic apparatus being provided with means for providing display parameters to the display device, the display device having a clamping mechanism to interconnect conducting patterns of the driving electronics in the apparatus to conducting patterns of the display panel, at least part of the display panel being flexible and the display panel being rollable or foldable, and the electronic apparatus having a further display device.

20. (Currently amended) A display device having a display panel, the display panel being movable between a first position in which the display panel is substantially not visible and a second position in which at least part of the a display panel is visible, in which the display device has a first housing, ~~the first housing~~ comprising the display panel in one of the first and second positions and a second housing comprising driving electronics for the display panel display parameters being

provided to the display panel in the second position, at least part of the display panel being flexible and the display panel being rollable or foldable.

21. (Original) A display device according to claim 20, the first housing comprising fixing means for fixing the first housing in an enclosure.

22. (Original) A display device according to claim 21, the fixing means for fixing the first housing in the enclosure being selected from the group of spindle mechanisms, clicking mechanisms, magnetic fixing and gluing.

23. (Original) A display device according to claim 21 having closing means for the enclosure.

24. (Original) A display device according to claim 20, the display panel being movable between a first position in which the display panel substantially is not visible and a second position in which at least part of the display pane is visible.

25. (Canceled)

26. (Original) A display device according to claim 20, the display panel in at least one of the first and second positions being fixed by a spring mounting to the first housing.

27. (Previously presented) A display device according to claim 20, the driving electronics in the second housing and the display panel being electrically interconnectable by mechanical coupling.

28. (Original) A display device according to claim 26, having a clamping mechanism to interconnect conducting patterns of the driving electronics in the second housing to conducting patterns of the display panel.

29. (Previously presented) A display device according to claim 20, in which the first housing comprises means for introducing and fixing the display panel.

30. (Original) A display device according to claim 20 having driving electronics and, having a clamping mechanism to interconnect conducting patterns of the driving electronics to conducting patterns in a movable housing.

31-33. (Canceled)

34. (Currently amended) A housing according to claim ~~34~~20 in which the housing comprises means for introducing and fixing the display panel.

35. (New) An electronic apparatus suitable for displaying information via a display device, the display device having at least one display panel and being provided with driving electronics, the display device being provided outside the electronic apparatus and the display panel being movable between a first position in which the display panel substantially is not visible and a second position in which at least part of the display panel is visible, the electronic apparatus being provided with means for providing display parameters to the display device in the second position, in which the display device has a first housing, the first housing comprising the display electronics for the display panel, at least part of the display panel being flexible the display panel being rollable or foldable, the electronic apparatus having a further display device, wherein the second housing is arranged between the first housing and the apparatus.

36. (New) An electronic apparatus suitable for displaying information via a display device, the display device having at least one display panel and being provided with driving electronics, the display device being provided outside the electronic apparatus and the display panel being movable between a first position in which the display panel substantially is not visible and a second position in which at least part of the display panel is visible, the electronic apparatus being provided with means for providing display parameters to the display device in the second position, in which the display device has a first housing, the first housing comprising the display panel in one of the first and second positions and a second housing comprising driving electronics for the display panel, at least part of the display panel being flexible the display panel being rollable or foldable, the electronic apparatus having a further display device, wherein the first housing is provided with interconnection means for connecting the display device with the apparatus.
